

CONTENTS

Preface	vii
Contributors	viii
On the Convergence of Various Subdivision Schemes using a Perturbation Theorem <i>S. Amat, K. Dadourian, and J. Liandrat</i>	1
Polyharmonic Wavelets Based on Lagrangean Functions <i>Barbara Bacchelli, Mira Bozzini, and Christophe Rabut</i>	11
On a Class of Spline Discrete Quasi-interpolants <i>D. Barrera-Rosillo and M. J. Ibáñez-Pérez</i>	21
Div-free Minimizing Splines under Tension <i>M. N. Benbourhim and A. Bouhamidi</i>	31
Analysis and Comparison of Real Functions on Triangulated Surfaces <i>Silvia Biasotti, Giuseppe Patanè, Michela Spagnuolo, and Bianca Falcidieno</i>	41
A Multiresolution Analysis with a New Family of Polyharmonic B-splines <i>Mira Bozzini, Christophe Rabut, and Milvia Rossini</i>	51
Geometric Characterization of Configurations with Defect Three <i>J. M. Carnicer and C. Godés</i>	61
Full Rank Interpolatory Vector Subdivision Schemes <i>Costanza Conti, Mariantonia Cotronei, and Tomas Sauer</i>	71
Feature Extraction and Parameter Estimation as a Tool for Acoustical Analysis <i>A. Crampton, C. J. Talbot, and J. L. Terry</i>	81
High Smoothness Parametric B-splines <i>Isabella Cravero, Carla Manni, and M. Lucia Sampoli</i>	91
Spline “Quasi-interpolants” with Boundary Conditions on Criss-cross Triangulations <i>Catterina Dagnino and Paola Lamberti</i>	101
Computation of Blob-like Structures Characteristic Scale with Wavelet Maxima Lines <i>Christophe Damerval and Sylvain Meignen</i>	111

Error Bound for Radial Basis Interpolation in Terms of a Growth Function <i>Oleg Davydov</i>	121
Numerical Integration by Spline Quasi-Interpolants in Three Variables <i>Vittoria Demichelis and Paul Sablonnière</i>	131
Generalized Hermite Interpolation with Radial Basis Functions Considering only Gradient Data <i>Svenja Ettl, Jürgen Kaminski, and Gerd Häusler</i>	141
Scattered Data Approximation of Noisy Data via Iterated Moving Least Squares <i>Gregory E. Fasshauer and Jack G. Zhang</i>	150
Superconvergence Properties of Some Bivariate C^1 Quadratic Spline Quasi-interpolants <i>F. Foucher and P. Sablonnière</i>	160
Controlling a Subdivision Tuning Method <i>Ingo Ginkel and Georg Umlauf</i>	170
Monotonicity Analysis over Chains and Curves <i>Dan Kucеровsky and Daniel Lemire</i>	180
On Some Applications of Piecewise Conformal Approximation <i>Jüri Lippus</i>	190
Smooth Spline Wavelets on the Sphere <i>Jan Maes and Adhemar Bultheel</i>	200
Reconstruction Formulas by the Linearization Coefficients of the Jacobi Polynomials <i>María Moncayo</i>	210
Degree Reducing Polynomial Interpolation, Ideals and Divided Differences <i>Tomas Sauer</i>	220
The Spectral Basis and Rational Interpolation <i>Garret Sobczyk</i>	238
Universality in Approximation and Estimation <i>V. N. Temlyakov</i>	247
Image Compression using Normal Mesh Techniques <i>Ward Van Aerschoot, Maarten Jansen, Evelyne Vanraes, and Adhemar Bultheel</i>	266
Projective Texture Atlas and Applications <i>Luiz Velho and Jonas Sossai Jr.</i>	276
